

TESTIMONIALS

Mohsin S. Sheikh, M.D.

"I first met Dr. Sheikh when accompanying an elderly friend for an appointment...He had been experiencing a lot of lumbar spine pain. The treatment was miraculous and so was Dr. Sheikh. I had never witnessed a doctor being as kind, patient and informative. Dr. Sheikh is wonderful at explaining ideas, procedures, etc. It was clear that it was extremely important to Dr. Sheikh that my friend know exactly what the treatment was composed of and how it would impact. He is very compassionate and empathetic with patients, and very calming. He has none of the typical "I'M THE DOCTOR" attitude. Based on my experience of him through my friend, I hired Dr. Sheikh and have also been treated wonderfully and have had great results. I would recommend Dr. Sheikh to anyone who could use this type of treatment." – SH

"Dr. Sheikh, I do not know that I can ever express my gratitude. You always answered my many questions, explained my treatment options and procedures and any medications you prescribed...You were also instrumental in coordinating my treatment with my other doctors. When any other doctor I saw asked me about my treatment history, I always told them to contact you because of your willingness and ability to communicate with all my doctors including my primary care physician, surgeons, and physical therapist...You made me feel that I was an active participant in my treatment...thank you for allowing me to live again without pain." – MB

"You made me realize that there really are doctors who care. Thank you, Dr. Sheikh." – AS

"I first met Dr. Sheikh in August 2008 while working at a pain management office. Immediately it was clear there was something different about this doctor. He saw every patient as an individual, taking the time to get a clear, precise history. He always took the time to explain, in detail, the treatment plan and why patients were in pain as opposed to just throwing out a diagnosis and prescribing treatments without explanation. He understood the frustrations some patients felt and never ceased to show compassion and do what was in their best interest. Dr. Sheikh was also a friend to the staff, teaching better work habits so patients could feel comfortable from the time they entered the office until they left. It truly was a pleasure having the opportunity to work with Dr. Sheikh, and if I am ever in pain, he would be my only choice." – KND

"Dr. Sheikh I just wanted to thank you for helping me with my pain problems. I never thought my body would feel as good as it does now. I appreciate the time you spent explaining what was wrong and what you were going to do. I will continue to follow you where ever you go." – LEJ

TESTIMONIALS

Mohsin S. Sheikh, M.D.

“For 25 years I suffered with lower back pain. An MRI revealed that I suffer from rheumatoid arthritis, three bulging discs, degenerative disc disease, bone spurs, pinched nerves and spinal stenosis in my lower lumbar spine. I tried just about every therapy available. Then one morning, at the age of 51, I woke up and could not walk because the pain was so extreme. The sciatic nerve pain ran down both legs into my feet. For one month I was reduced to walking with the aid of a walker. At that time I met Dr. Mohsin S. Sheikh, MD. Dr. Sheikh changed my life. With treatment performed by Dr. Sheikh I not only can walk on my own, but I can stand for extended periods of time which I have not done for many years. Dr. Sheikh was able to get me off of medications (such as prednisone) which caused weight gain over many years. My pain level is under control and as a plus, since Dr. Sheikh treated my back, I have lost 120 lbs. to date. I have become active again, more self-sufficient and feel like a new person. Thank you Dr. Sheikh!” – CC

“As a 64-year-old male that has had back problems for better than 30 years, I have followed many and various treatment avenues: Physical Therapy, Massage Therapy, Chiropractic, Acupuncture, Back Brace and Blind Epidurals. All these treatments brought some relief but none offered any sustained relief. I reached the point where I was suffering with intractable pain just walking. (I could not walk more than a block without having to stop or even sit down.) As an active EMT, treating patients was becoming dangerous. I was referred to Dr. Sheikh at the peak of my difficulties. He was extremely thorough and specific with regard to my pain paths, which he mapped with care. His procedures focused specifically on several areas that required differing treatments as opposed to using a broad stroke technique attempting to mask the pain. It became obvious that the deterioration of my spine and increasing pain would eventually require decompression and fusion surgery. However, the relief that came as a result of Dr. Sheikh’s precise and effective therapy, delayed surgery for several years, not merely by managing the pain, but by eliminating the pain for prolonged periods of time. I am most grateful to Dr. Sheikh and have referred many people with serious pain issues to him. They have all agreed, Dr. Sheikh’s treatments are nearly miraculous.” – REB

“Thank you for the epidural (injection) rendered last week. The pain was so bad, I couldn’t take it one more day. I feel so much better now. Thank you in my humblest and sincerest way.” – PM

“Being in the medical field myself, I have had several encounters with many offices. I am very impressed with Dr. Sheikh and his knowledge. He has been very key/instrumental in thoroughly explaining everything to me—using visual & verbal. He has been wonderful in responding immediately to my needs and also helping to interpret my neurosurgeon’s assessment...I am very grateful to Dr. Sheikh. It has been always a great experience...10+++/10 satisfaction.” – AM
